

Practice Questions

Python Programming Session 1

Question 1: Hotel Billing System

Write a program to calculate the total hotel bill using room charge per day, number of days, food charges, and service charge percentage. Display subtotal, service charge, and final bill.

Question 2: Student GPA Calculator

Write a program to input marks for 4 subjects and calculate total, average, and GPA using a simple formula.

Question 3: Vehicle Trip Cost Estimator

Write a program to calculate total trip cost using distance traveled, fuel efficiency, fuel price per liter, and highway charges. Display fuel used, fuel cost, and final trip cost.

Question 4: Employee Payroll System

Write a program to calculate employee salary details using basic salary, overtime hours, overtime rate, bonus, and tax percentage. Display gross salary, tax amount, and net salary.

Question 5: Online Shopping Invoice

Write a program for an online store to calculate the total bill using prices and quantities of 3 products, delivery charge, and discount percentage. Display a formatted invoice.

Question 6: Gym Membership Payment System

Write a program to calculate membership payment using monthly fee, number of months, registration fee, and personal trainer fee. Display total before tax, tax, and final payment.

Question 7: University Course Fee Calculator

Write a program to calculate semester fees using number of modules, fee per module, library fee, and registration fee. Display the full payment summary.

Question 8: Mobile Data Usage Calculator

Write a program to calculate internet bill using data usage in GB, cost per GB, and additional service charges. Display data cost, additional charges, and final bill.

Question 9: Cinema Ticket Booking System

Write a program to calculate total ticket payment using number of adult tickets, number of child tickets, ticket prices, and snack package cost. Display a detailed bill.

Question 10: Loan Interest & Final Settlement Calculator

Write a program to calculate total interest, final payment, and monthly installment using loan amount, interest rate, and repayment period.

Question 11: Electricity Power Consumption Analyzer

Write a program to calculate electricity consumption cost using appliance wattage, hours used per day, and cost per kWh. Display total power consumption and final bill.

Question 12: Event Budget Planner

Write a program to calculate total event budget using hall rental, decoration cost, food cost per person, number of guests, and sound system rental.

Question 13: Flight Ticket Cost Calculator

Write a program to calculate total travel cost using ticket price, baggage fee, airport tax, and hotel booking charge. Display a formatted travel summary.

Question 14: Construction Material Cost Estimator

Write a program to estimate construction cost using cement bag count, price per bag, sand cost, labor cost, and transportation cost.

Question 15: Freelancer Income Calculator

Write a program to calculate monthly freelancer earnings using number of projects, payment per project, platform commission percentage, and tax percentage.

Question 16: Restaurant Billing System

Write a program to calculate a restaurant bill using prices of meals, beverages, dessert, service charge percentage, and tax percentage. Display a complete bill summary.

Question 17: Car Rental Payment Calculator

Write a program to calculate total car rental payment using daily rental fee, number of rental days, fuel charges, and insurance fee.

Question 18: Water Consumption Billing System

Write a program to calculate water bill amount using water usage in liters, price per liter, maintenance fee, and tax percentage.

Question 19: Bookstore Sales Calculator

Write a program to calculate the final payment for a bookstore using prices and quantities of books, membership discount percentage, and delivery charge.

Question 20: Fitness Tracker Calorie Calculator

Write a program to calculate total calories burned using exercise duration, calories burned per minute, and additional workout bonuses.
